

Hilltop Sea Green

Gray-Green when extracted from the quarry, a percentage of this slate will gradually weather to rich tones of buffs and tans reflecting autumn foliage coloring.

Hilltop Gray Black

This semi-weathering Vermont gray-black slate will weather in part to tones of buff and brown upon exposure to the elements.

Hilltop Vermont Black

A textured semi-weathering black slate with light and dark shades, creating a traditional look to any roof. Some weathering to tones of buff will occur when exposed to the elements.

Hilltop Semi-Weathering Gray

Clear gray or gray with small black markings when extracted from the quarry, a percentage of these slates may weather to tones of buff and brown.

Hilltop Semi-Weathering Purple

A Royal Purple slate with some markings of green. A small percentage of some weathering to buff and brown may occur.

Hilltop Unfading Green

An unfading slate with a deep, rich lawn green color. A captivating beauty often used in combination with purple and other complimentary colors.

Hilltop Unfading Gray

Unfading gray-green slates with small black or darker gray markings. The original color will hold when exposed to the elements.

Hilltop Mottled Purple

An attractive unfading slate with a natural blend of soft shades of purples and greens. Creates an exceptional roof which holds its color.

Hilltop Unfading Purple

A majestic unfading deep purple slate with occasional inclusions of green. Commonly used in combination with unfading green.

Hilltop Truthville Red

An unfading brilliant red slate with a truly unique gemstone appearance. Often used as an accent with other colors. The bright red color stays consistent, even over extended time and exposure.

Hilltop // Slate

Established in 1948, Hilltop Slate owns and operates 600 acres of natural slate minerals. As a quarry and producer of real slate from the Vermont/New York Slate Valley, Hilltop Slate satisfies a host of external and internal applications.

Formed up to 590 million years ago, each piece of slate has its own fingerprint that reflects its natural beauty and unique character. In addition to the aesthetic qualities of real slate, it is exceptionally durable, unaffected by temperature and impermeable to water.

These qualities have been time tested for centuries particularly for roofing applications. Today natural slate is the premier choice for roofing projects. From our 13 quarries, unparalleled resources and expertise, we produce natural slate roofing to exceed the requirements of ASTM C 406 Grade S1. This expertise ensures the highest standards of customer service.

Hilltop//Slate uses only natural material extracted from some of the world's finest deposits. There is a choice of ten colors that are further complimented by the distinctive natural texture of slate, creating an added dimension to any application. A variety of color, size and thickness can be used to create a pattern or subtle contrast in design.

Natural slate is recognized as one of the finest building materials available in the world. The natural beauty and durability of slate with its' matchless capability to withstand the most extreme environmental condition is unique.
